Company profile:

Manufacturer
Distributor

ISO certifications:

Company activity:

Primary Antibodies, Secondary Antibodies, Isotype Controls, Proteins, Peptides, Research Reagents, Kits, Cell/Tissue Lysates, Slides, Serum Products

Company description:

GeneTex, Inc. started operations in early 1997 in San Antonio, Texas. GeneTex was founded by three internationally known scientists with recognized expertise in oncology and infectious diseases and a businessperson with extensive experience in startup biotechnology companies.

Based on the breadth of experience and expertise of our founders, the company's initial focus was concentrated on a portfolio of reagents that met the needs of researchers working to solve the puzzle of what causes cancer, how cancer can be better diagnosed, and what direction of treatment the doctor and patient should consider.

Our very first products were directed toward breast cancer research and prognosis. More recently, we have added tools for scientists studying basic mechanisms common to many forms of cancer. These research tools include immunological reagents used to study specific proteins and events involved in the regulation of the cell cycle and DNA repair and replication.

Being a small company has its advantages and with GeneTex you know you will get the personal attention you deserve. We strive to offer highest quality antibody reagents following extensive research, development, and validation. We hold ourselves to the highest standard of commitment and excellence, and our scientists are dedicated to assist you in

Company specialty:

Primary Antibodies, Secondary Antibodies, Isotype Controls, Proteins, Peptides, Research Reagents, Kits, Cell/Tissue Lysates, Slides, Serum Products
