Company profile:

Manufacturer

Company activity:

Custom Polyclonal Antibody Production, Custom Peptide Synthesis

Company description:

From Biology to Discovery

The sequencing of the human genome is considered as one of the most important milestone of the century reached by the Life Science research community. Biologists have estimated the total number of genes at 25,000. Now, the annotated human genome sequence creates a range of new possibilities for biomedical research and permits a more systematic approach to proteomics.

A concerted effort on the human proteome would certainly generate probes for identifying new targets for therapeutics. As researchers are focusing their efforts on determining the biological functions, interactions and regulation of the encoded proteins, Abbiotec is dedicated to developing cell biology-based research tools that assist scientific discoveries.

Custom Polyclonal Antibody Production is offered to our customers with free peptide design. For your success, let a scientist be your contact person.

Custom Peptide Synthesis is offered with a numerous choice of peptide modification to fit your assay.

Company specialty:

Our collection of polyclonal and monoclonal antibodies includes:

- CD markers
- Complement Components
- Cytokines
- Immunoglobulins
- Peptidases
- Protein Kinases
- Tumor Suppressors

Visiting address:

Address: Dunbrook Road 7985

Location

Postalcode: CA 92126
City: San Diego
Country: United States

Phone nr. 1 858 586 0500
Fax nr. 1 858 586 6252

Active in region:

North America

World wide subsidiaries:
