European Antibody Congress 2010

Description

European Antibody Congress 2010

Discover. Develop. Get to market.
The 6th annual European Antibody Congress is the industry's largest and most influential monoclonal antibody conference

The 6th annual European Antibody Congress is the World's leading conference addressing critical scientific issues and strategic industry challenges associated with therapeutic mAb development.

Industry's largest event for monoclonal antibody discovery and development

Harnessing new opportunities

The pharmaceutical industry as a whole is suffering from single digit growth, thin uninspiring pipelines and pressure from an ever-aggressive generics industry – not so for monoclonal antibody therapies! The therapeutic mAbs market is expected to triple in value over the next six years, making it one of the most exciting segments of the pharmaceutical industry today.

With now over twenty two FDA approved therapies – six of them having reached blockbuster status - and seven EMA mAb approvals alone since 2009, Biotech pipelines are continuing to overflow with over 160 monoclonal antibody based drugs; the market is thriving!

Overcoming antibody challenges

With this extraordinary growth it has become even more critical to explore the diverse methods of antibody development. From protein design, engineering, production and application of technologies it is vital that drug developers investigate new products to meet an ever widening group of targets. Overshadowing this contentious market is the threat of the looming biosimilars industry. Regulators are making tracks to establish guidelines for biosimilar

mAb development and assessment.

Meanwhile drug companies are assessing the impact of this developing field as preparations are made for a tumble off the patent cliff. This is the crucial time to come to grips with the reality of biosimilar antibodies in the European market.

Learn from the industry's leaders

The 6th annual European Antibody Congress is the World's leading conference addressing critical scientific issues and strategic industry challenges associated with therapeutic mAb development. Showcasing major antibody structural improvements, global trends, recent intra-market authorisation and clinical progress, this event sees unrivalled industry participation.

Over 50 leading scientists from Big Pharma and specialised biotech companies will share their expertise and groundbreaking conclusions throughout three jam-packed days. Hear, learn, debate and act on the most critical scientific and business opportunities in the antibody sector.

Find out why this phenomenal technology is taking the medical world by a storm, who's leading the movement and how, at industry's largest event for antibody discovery and development. Get ready for the age of the antibody!
