HIGHLY POTENT ACTIVE PHARMACEUTICAL INGREDIENTS	Description
---	-------------

## HIGHLY POTENT ACTIVE PHARMACEUTICAL INGREDIENTS

The global market for Highly Potent Active Pharmaceutical Ingredients is currently on a growth fast track, largely driven by its major use in oncology for cancer treatment and more often in the form of ADCs. Over a quarter of drugs worldwide now contain HPAPs, as they have proven to be more effective than other APIs. However, working with APIs high in potency and cytotoxicity comes with many regulations and requirements, and presents pharmaceutical companies with challenges such as handling, containment, cost and security questions.

The inaugural Highly Potent Active Pharmaceutical Ingredients conference features key speakers of the industry presenting challenges, issues, innovation and new developments in various areas of HPAPI production, development and manufacturing. Hear about new innovative containment risk assessment tools and containment strategies when handling HPAPI products. Guidance for the evaluation and management of cross-contamination will be addressed, as well as newest control strategies and solutions. Pharmaceutical companies will be presenting their approaches to scale-up processes and will be discussing manufacturing facility designs and requirements, also introducing flexible facilities. Learn more about CMO selection strategies and how to improve information and technology transfer.
